

New BALANCE probiotic blend optimizes digestion for better health, athletic performance and positive mental well-being.

- **Supports Gut and GI Health**
- **Promotes Antioxidant Activity**
- **Over 40 billion CFUs**
- **9 Probiotic Strains**
- **Gluten-Free**

The human body counts on healthy levels of bacteria in the gut for several functions, in addition to breaking down foods and absorbing nutrients. Ultimate Nutrition® has developed Balance help optimize all these processes.

Balance has been formulated with nine specific “live” strains of bacteria, delivering over 40 billion colony-forming units (CFU's) per serving.

Bifidobacterium strains, commonly found in fermented foods like yogurt and cheese, should be supplemented when there is a shortage of normal bacteria. Balance includes two species of bifidobacterium – bifidum and longum, both of which have been selected to restore optimum levels of beneficial bacteria in the gut.

Streptococcus thermophilus is another essential bacteria that has been thoroughly researched for its various health benefits, like digestive improvements (including the breakdown of dairy lactose), immunity support, a decreased risk of developing kidney stones, and enhancement of HDL (good cholesterol) levels.

Available in 30-Capsule Bottles
