

ADVANCED FORMULA PROZYME

Taking supplemental enzymes boosts the immune system, helps prevent inflammation due to wear and tear and/or repetitive motion around a joint, and keeps the blood flow normal. Ultimate Nutrition's Advance Formula Prozyme contains the most important enzymes that we all need regularly and routinely. Amylase hydrolyzes starch, glycogen and dextrin to form glucose, maltose and limit-dextrins. Lipase hydrolyzes lipids to form fatty acids and glycerol. Cellulase cannot be produced by the human body. We must provide cellulase in our diets. Cellulase digests cellulose (fiber). This well-rounded enzyme product also contains protease and lactase to digest proteins and lactose respectively. The activity of the enzymes in Advance Formula Prozyme is carefully assessed to ensure that each lot contains the amounts that the body needs to replenish the lost enzymes.

Available in 100 Capsule bottles.
