

Ultimate Nutrition, Power (Immunity)

Strengthening your immunity just makes sense; nobody wants to get sick right? This is why **Ultimate Nutrition** has developed **Power**, the perfect supplement to serve as your shield of defense. Studies have confirmed that an inadequate intake of micronutrients actually suppresses your immunity, leaving you more vulnerable to infection¹.

The team of Scientists at **Ultimate Nutrition** developed **Power** knowing that the right micronutrients can strengthen your immunity in three ways; by supporting physical barriers like skin, aiding in cellular immunity, and producing antibodies¹. Vitamins A, C, E and the trace element Zinc assist in enhancing your skin barrier function, and they have all been included in **Power**¹. Additionally, Vitamins B₆, B₁₂, C, E, Copper and Selenium have been added for the synergistic support of your immune cells¹. Lastly, all these micronutrients except for Vitamin C and Iron are working together to assist in your antibody protection and provide your immunity with the **Ultimate** support.

Obviously **Power** cannot be mentioned without highlighting the importance of Vitamin C, the star ingredient. Studies have documented that the intake of Vitamin C can decrease common cold incidences². Supplementation of Vitamin C has also been demonstrated to stimulate the immune system by enhancing T-lymphocyte proliferation and may also play a significant role in the regulation of the inflammatory response¹. Unlike regular orange juice (*which only gives you roughly 43 mg of Vitamin C*), **Ultimate Nutrition** has delivered a whopping 1000 mg of Vitamin C in **Power** and is available in a delicious, easily-mixable orange flavor with none of the sugar. **Power** up your body's defenses so you can spend less time with old remedies that simply don't work and more time living your active life!
