### **Ultimate Cuisine**

We know that one of the keys to permanent and effective fat loss is to speed up our body's metabolism. Metabolism simply means the speed in which our body utilizes and burns through food. A fast metabolism means that your body processes and utilizes the nutrients that it needs and then eliminates those it doesn't.

There are two basic ways to naturally speed up your body's metabolism. The first is through resistance training, lifting weights. Lean muscle tissue is a very metabolically active tissue; it requires a lot of energy to maintain. The body gets this energy from burning calories. So the more lean muscle you have, the faster your metabolism becomes and the more calories that you will burn at rest.

The second way to effectively speed up your body's metabolism is by eating small, well-balanced, nutritious meals or snacks every three to four hours. This alone can drastically improve the efficiency of your body's metabolism. For those of us with busy, often hectic lives, preparing and eating well-balanced meals every three to four hours can be a challenge.

Ultimate Nutrition offers the solution. Ultimate Cuisine is the Ultimate meal replacement formula on the market today; great tasting and nutritionally complete. Each nutritionally complete dose supplies your body with 37 grams of the highest quality (as measured by BV biological value) peptide-bonded and free-form amino acids, predigested complex carbohydrates (glucose polymers), pure crystalline fructose and 100% of the U.S. Daily Values U.S.P. quality vitamins. No soy protein or artificial sweeteners are used.

We gain body fat by having poor eating habits; one way to undo the damage is to reverse the cycle by developing good eating habits. Ultimate Cuisine meal replacement powder helps to make this possible. For optimum fat-burning and muscle-building results, it is important to consume a high-protein, moderate-carb, low-fat meal about every three to four hours. This equals approximately five to six meals per day. So, replace one or two of your whole food meals with meal replacements and you will drastically start cutting out unneeded calories, calories that can add up and, if not burned off, be stored as body fat.

Ultimate Cuisine meal replacements provide a perfect, compact meal in two scoops that is high in protein, and contains a wide array of vitamins and minerals. It is very nutrient dense and can be mixed easily and conveniently.

## FREQUENTLY ASKED QUESTIONS:

### 1 How do I take Ultimate Cuisine?

Begin by reading the entire label carefully and following the labeled directions for use. Add two scoops of Ultimate Cuisine to 12 ounces of water. Mix thoroughly, chill and serve. Fruit, honey and yogurt can be added to make a thicker, full bodied nutrition drink if desired. Just replace one or two meals daily with delicious and nutritious Ultimate Cuisine and eat moderately the rest of the day.

### 2 Does Ultimate Cuisine Boost Immunity?

Yes. Whey protein is superior to other proteins in its property to boost immunity by increasing the body's own antioxidants. Ultimate Nutrition's Ultimate Cuisine premium whey concentrate is isolated by a complex low temperature processing system to retain immune boosting proteins which include B-Globulin, A-Lactalbumin, Glycomacropeptide, immunoglobins and, among others, Lactoferrin. All constituents in this category inherently boot the immune system.

### 3 Should I take a multivitamin with Ultimate Cuisine?

There is no need to take an additional multivitamin. Ultimate Cuisine contains 100% of the U.S. Daily Values of U.S.P. quality vitamin A, vitamin C, vitamin D3, vitamin E, vitamin B1 (thiamin), vitamin B2 (riboflavin), Niacin, vitamin B6, Folic Acid, Vitamin B12, Biotin, and Pantothenic Acid.
