

Lean Physique

Clinically tested Svetol helps reduce body weight by regulating glucose levels, as well as by regulating the absorption of glucose in the intestines. By inhibiting the activity of glucose-6-phosphatase, Svetol limits the release of glucose into the general circulation, thus encouraging the release of triglycerides from adipose tissue. Through this process Svetol induces an increase in the lean mass to fat mass ratio and a reduction in weight. A clinical study of 50 patients observed an average weight reduction of 5.7% in those who took the clinically researched amount of Svetol (400mg) found in Ultimate Nutrition Lean Physique. Lean Physique also contains 12 grams of highly purified protein, 2 grams of fiber, and zero grams of sugar per serving.

Available in Chocolate Crème and Vanilla Café, 12.35 oz containers.
