Lean Physique

DECAFFEINATED GREEN COFFEE EXTRACT, SVETOL[®]

Clinically tested Svetol helps reduce body weight by regulating glucose levels, as well as by regulating the absorption of glucose in the intestines. By inhibiting the activity of glucose-6-phosphatase, Svetol limits the release of glucose into the general circulation, thus encouraging the release of triglycerides from adipose tissue. Through this process Svetol induces an increase in the lean mass to fat mass ration and a reduction in weight. A clinical study of 50 patients observed an average weight reduction of 5.7% in those who took the clinically researched amount of Svetol (400mg) found in Ultimate Nutrition Lean Physique.

I WANT HEALTHY HAIR, SKIN AND NAILS

Are you frustrated with brittle nails, lackluster skin, and split ends? Ultimate Nutrition Lean Physique contains an essential blend of nutrients to enhance the growth of healthy hair, skin, and nails. It has all the essential vitamins and minerals to help you stay healthy and feel good about yourself. For example, Ultimate Nutrition Lean Physique contains 3000 mcg of biotin, an essential B vitamin found to be beneficial for maintaining healthy hair. The unique blend of vitamins and minerals in Ultimate Nutrition Lean Physique make you feel good on the inside and look beautiful on the outside!

WHY DO I NEED PROTEIN?

Don't associate protein only with massive muscle gain, because it can be also be used as a weight loss aid. A clinical study found that participants had greater satisfaction, less hunger, and greater weight loss when they increased their protein intake. They were able to consume 221 FEWER calories a day when they followed a high protein diet and regulated their calorie intake. Since 3,500 calories create a pound of fat, you could avoid a gain of 46 pounds in a single year! When a high protein diet is paired with exercise, it has been shown to enhance weight and fat loss and actually improve lipid levels.

WHAT ARE THE HEALTH EFFECTS OF FIBER?

You may be familiar with fiber's digestive regulatory function. Fiber also provides many other health benefits. Eating a higher-fiber diet, as part of an overall healthful lifestyle, may play a role in attaining a healthy BMI (body mass index) and weight loss. Eating a high-fiber diet may cause you to feel full for a longer time than usual because a meal high in fiber produces a sensation of fullness in your stomach. Research has shown that women with low-fiber, high fat diets are more likely to be overweight than women who follow high-fiber, low-fat diets. Other research suggests that most of us do not come close to the recommended intake of 20 grams to 35 grams of fiber a day. Supplement your diet the right way with LEAN Physique.

WHAT ARE CLA AND OMEGA 3?

CLA is a naturally occurring healthy fat, and omega 3 fatty acids are essential polyunsaturated fatty acids. Ultimate Nutrition recognizes the importance of key fatty acids for anyone looking for the perfect physique, and that is why we include these in Ultimate Nutrition Lean Physique.

FREQUENTLY ASKED QUESTIONS:

1-What is CLA?

CLA (conjugated linoleic acid) is a an omega 6 fatty acid that was first discovered in the early 80s that continues to be studied for its diverse applications in promoting good health. CLA helps reduce body fat while increasing lean muscle mass and may help you lose inches in your abdominal area.

2- Can Lean Physique replace physical activity or changes in eating habits as a way to lose weight?

No. The use of any product to help lose weight should be combined with physical activity and improved diet to lose and maintain weight successfully over the long term. In their search for the best weight loss program, many people forget the vital role that exercise plays in maintaining a healthy body weight.
