

Pre Gold

In today's competitive landscape, Ultimate Nutrition's team of scientists has pioneered the next generation of pre-workout: **Pre Gold**. This innovative approach covers far more than just the energy boost delivered by the average "stim-bomb."

Nitric oxide support and blood flow optimization are essential components of the modern training regimen. Clinical studies have shown the efficacy of **L-Citrulline**, a precursor to arginine, on **increasing plasma nitrate levels and nitric oxide availability** to **optimize pump** during workouts. Research has shown that supplementation with **Potassium Nitrate resulted in a ~846% increase in maximum power output** in athletes when compared to placebo.⁷ Recent studies have shown that the combination of these ingredients form a powerful duo to improve vascular conductance, delivering more oxygen to muscles when they need it most.

Obviously, no pre-workout formula is complete without an energy source. Ultimate Nutrition's innovative approach utilizes a unique blend of ergogenic aids, providing sustained energy. **Synephrine**, the active ingredient in **Citrus Aurantium**, has been shown to support the **increased energy expenditure** associated with intense exercise, while also **promoting lean muscle development**.⁴ Explosiveness and intensity are delivered by a time-released blend of **Caffeine** and **DiCaffeine Malate**. This two-stage energy matrix has been shown to **increase energy expenditure by 21.5%** in the first hour of training.¹ The second phase of energy propels athletes to power through the final stages of intense training. Research shows a sustained energy potential with an additional 10% increase in energy for the second hour of exercise.¹

To enhance the intensity of the energy matrix, a clinically-effective dose of **beta alanine** was included for **Ultimate power output**.⁵ To amplify the effects of beta alanine, DiCaffeine Malate has been clinically proven to increase total weight lifted and elevate peak power.³ To provide an extra layer of **focus**, the synergistic pairing of caffeine and **taurine** was utilized.

Vitamin B6 and Vitamin C deliver the ancillary support for maximum performance and to ensure adequate vitamin replenishment. **Pre Gold** has been formulated to equip athletes with the necessary PUMP, ENERGY, and POWER for an explosive workout. Get ready for the gold and get **Pre Gold**.
