Whey Oats & Honey

Protein has a number of different roles in the body including repairing body cells, building and repairing muscles and bones, providing a source of energy, and controlling many of the important processes in the body related to metabolism. Whey protein is a high quality, complete protein, with all the essential amino acids. Whey protein is also the richest known source of naturally occurring branched chain amino acids (leucine, isoleucine and valine). These are important for active individuals, individuals who exercise, and professional athletes. Ultimate Nutrition Whey Oats & Honey provides 25 grams of protein per serving.

Whole grain oats are complex carbohydrates that provide fuel for your muscles for hours due to the way your body processes this carbohydrate. Whole grain oats also contain beta-glucan, a specific type of fiber that has been shown to have beneficial effects on your heart and cholesterol levels. Whole grain oats have also shown to have antioxidants as part of their nutrient profile. Oats and other whole grains have been shown to be a significant source of magnesium. This mineral behaves as a co-factor to many enzymes used in several body processes; including the body's use of glucose.

Whey Oats & Honey is unique, in that it:

- Offers 25 Grams of Protein per Serving
- Is Made with Whole Grain Oats
- Is Enhanced with Honey
- Contains All Natural Ingredients

Honey is also a great natural carbohydrate source for athletes. Carbohydrates consumed after a workout help to replenish glycogen in muscle. Carbohydrates, when used during short length exercise, can also help to maintain blood glucose levels and delay fatigue. Honey also contains a variety of nutrients that acts as antioxidants, eliminating free radicals that can damage the body. This combined with Honey's antimicrobial properties make it a great natural choice to help support the immune system.
