

LEUCINE

L-leucine Supplement

Each 1-scoop serving of Ultimate Nutrition's **Leucine** features 5 grams of rapid absorbing, free-form L-leucine. Overall, three amino acids are classified as branched chain amino acids (BCAAs) based on their molecular structure: leucine, isoleucine, and valine. During strenuous exercise, leucine is the BCAA that depletes most rapidly, thus making it the most crucial to replenish. Specifically, blood leucine levels decline by about 30% during both strength training and cardio workouts. Supplementing with leucine to increase availability has several benefits related to muscle protein synthesis (MPS), including activating the main muscle building pathway, mTOR, for up to 24 hours post-workout. Leucine in its free-form state is advantageous in that it doesn't take as long to digest as leucine derived from food. This enables L-leucine to pass quickly through the stomach and intestine and directly into the bloodstream for faster absorption. Add a scoop to your favorite protein shake or sports drink to replenish diminished leucine reserves and enhance muscle growth and recovery!
