

SUPER GLUTAMAX CAPSULES

The amino acid glutamine is a great source of energy for white blood cells and other cells of the immune system. Glutamine plays a critical role in gastrointestinal health. While it is largely made in the lungs and the brain, glutamine is also present in muscle and liver cells. Growth hormone is an extremely important hormone, which triggers the release of IGF-1 (insulin growth factor-1) that is the workhorse to help reduce weight, increase lean body mass, increase bone density and, of course, promote general health and wellbeing considerably. Glutamine is known to induce the secretion of growth hormone. Ultimate Nutrition's' Glutamax is designed to deliver these benefits of glutamine. It helps reduce the impact of overtraining syndrome, promotes faster muscle recovery after intense and regular exercise, it provides "fuel" for the immune system for production of white blood cells to ward off infections, and induces growth hormone making use of the body's own supply of this vital hormone.

Available in 100 capsule bottles.
