LIQUID GLUTAMINE
L-Glutamine Supplement

Glutamine accounts for over 20% of all circulating amino acids in humans, making it the most prevalent in the body. Furthermore, it comprises more than 60% of the free amino acid pool in skeletal muscle, with the remainder residing in the lungs, liver, brain, and stomach tissue. During exhaustive exercise and physical training, glutamine is highly utilized and levels can become depleted by as much as 50%. Thus, supplementation after exercise may help reduce soreness and repair fatigued muscle tissue by reducing the “cannibalization” of existing glutamine reserves.

In addition to maintaining muscle mass and impeding muscle breakdown, glutamine supplementation may have several other benefits to bodybuilders and fitness buffs. Glutamine enhances glycogen storage, which optimizes energy sources for muscle tissue, resulting in improved strength and endurance. As it enters the Krebs Cycle, glutamine converts to glutamate and produces adenosine triphosphate (ATP), a molecule that transports energy within cells for metabolism. With adequate amounts of glutamine in the body via diet and/or supplementation, less muscle tissue is broken down in the process of supplying glucose. Increasing the availability of glucose to muscles during strenuous physical activity via glutamine supplementation may increase exercise performance, intensity, and recovery.

Glutamine also aids in the removal of nitrogen, lactic acid, pyruvate, and other byproducts of energy metabolism from muscle tissue, thereby enhancing recovery. Supplementation may also counter the effects of cortisol, the “stress hormone” secreted at higher levels than normal during times of strenuous physical activity. Increased levels of cortisol can diminish the body’s glutamine reserves.

Liquid Glutamine by Ultimate Nutrition® is the fast and convenient way to get the benefits of glutamine supplementation in a refreshing burst that protects, repairs, and builds new muscle. Each single-serving bottle (3 fl oz or 90 ml) contains our exclusive **liquid** formulation and is ideal for drinking immediately after exhaustive weight training, thus facilitating recovery in time for the next workout. At 40 calories, Liquid Glutamine is packed with 2.5 grams of premium USP L-glutamine and comes in fruit-punch flavor.
