

Ultimate Nutrition

Ultimate Burners

Ultimate Burners is a balanced lipotropic formula to be used as a dietary supplement to aid fat loss. Ultimate Burners is a combination of Vitamin B6 along with several amino acids to help build protein and strength, while increasing stamina. Ultimate Nutrition's formula is designed to enhance liver function and increase the flow of fats and bile from the liver and gallbladder. Lipotropics prevent an abnormal accumulation of fat in the liver. Besides improving fat metabolism, lipotropics also aid in the metabolism of fat soluble nutrients and aid the liver in its other metabolic functions such as the processing of hormones, estrogen, sulfa drugs, glucose, and glycogen. Ultimate Burners works by increasing production of lecithin in the liver, helping to keep cholesterol more soluble and lessening deposits in the blood vessels. It prevents accumulation of fats in the liver and it detoxifies amines, which are by products of protein metabolism.

Vitamin B-6 is a water soluble vitamin and is required for the proper absorption of vitamin B12, and for the production of hydrochloric acid and magnesium. Vitamin B6 helps linoleic acid function better in the body and plays a major role in the breakdown and utilization of carbohydrates, fats, and proteins. In addition, vitamin B6 facilitates the release of glycogen from the liver and skeletal muscles so that it can be used for energy. Vitamin B6 also helps to maintain the balance of sodium and potassium, which regulate body fluids and promote the normal functioning of the nervous system and skeletal muscle system.

Choline aids in emulsifying cholesterol so that it doesn't settle on arterial walls. It works well with inositol to utilize fats and cholesterol, and it also works well with methionine in detoxifying amines, which are by-products of protein metabolism. Choline aids in the digestion of fats, and is also very beneficial for a number of cognitive functions.

Inositol metabolizes fats and cholesterol and aids in transporting fat in the blood system. Thus it is an aid in the redistribution of body fat. It helps to lower cholesterol levels. It is a member of the B-Complex group and is a lipotropic agent. Inositol helps with the breakdown of fats, and in the reduction of blood cholesterol to go along with a number of other health benefits

L-Methionine is an amino acid and antioxidant that helps to breakdown fats, averting build up in the liver and arteries. L-Methionine aids in lowering cholesterol. It detoxifies amines which are by-products of protein metabolism. L-Methionine acts as a catalyst for choline and inositol thus speeding up their function.

Betaine HCL (betaine hydrochloride) is betaine with hydrochloric acid. It is used as a digestive aid due to its strong acidity. Betaine HCL assists the body's natural stomach acids to ensure appropriate absorption of nutrients.

L-Carnitine has long been used by athletes for longer workout periods. It is used in fat burners because it helps in converting stored fat into energy. It can also help in controlling hypoglycemia and thereby benefits diabetics. A deficiency can cause impairment of heart tissue. L-carnitine assists in the transport of fat through the cell membrane and into the mitochondria within the cell, where these fats are oxidized to produce the cellular energy ATP. L-Carnitine is a therapy for low energy levels, congestive heart disease, and other diseases associated with low cellular energy.

Ultimate Nutrition's Ultimate Burners is manufactured only from the highest quality sources available and packaged under extensive quality controls to insure maximum potency and freshness.

FREQUENTLY ASKED QUESTIONS:

1. What are lipotropic supplements?

These nutrients promote the utilization of fats in your system. Instead of just storing fats as your body does now, lipotropic agents help to convert fats *directly* into energy.

2. How should I take this?

Suggested use is to take two tablets twice daily with meals.

3. Who is Ultimate Burners for?

Ultimate Burners is for anyone looking to decrease their body fat percentage through diet and exercise, for getting that "cut look" and for people looking to improve fatty acid metabolism.
