Diet Ripped

Weight loss is one of the most talked about health issues, as losing weight can significantly improve your health and lower your risk of heart disease and other serious conditions. Ultimate Nutrition's Diet Ripped is formulated to suppress your appetite and increase your energy levels, resulting in weight loss. This natural diet product contains a unique proprietary blend of dietary fiber, botanicals and antioxidants, which work together to curb your appetite.

When we formulated Diet Ripped, we focused on ingredients that could help diminish appetite, cut cravings, increase metabolism, energy levels, and increase the amount of calories burned. We further examined each product's individual ability to burn fat and keep fat from binding to the body resulting in weight gain.

Glucomannan is a water-soluble dietary fiber that is derived from konjac root. Because glucomannan can absorb many times its weight in water, it is very useful in promoting weight loss via increasing feelings of fullness. Glucomannan delays stomach emptying, leading to a more gradual absorption of dietary sugar; this effect can reduce the elevation of blood sugar levels that is typical after a meal.

People in India have been using *Gymnema Sylvestre* as a sugar killer for centuries. *Gymnema sylvestre* has been successful in controlling the blood sugar level without reducing it to below the normal blood sugar levels. Due to its non-toxic nature and sweetness-suppression activity, *Gymnema sylvestre* plays a role in treating conditions caused by excessive sugar intake.

Grape Seed Extract and Green Tea Extract are rich in flavonoids, phytochemicals that have antioxidant properties some consider even greater than the old standbys vitamin C and vitamin E. In vitro experiments have previously shown that polyphenols, the antioxidants present in high quantities in grape seed extract, stimulate the breakdown of fat. Green tea may help people to boost metabolism, reduce appetite and lose weight. It also helps to reduce fatigue and increase energy.

Alpha Lipoic Acid (ALA) supports the body in two ways, it helps convert food into energy and promotes antioxidant protection. ALA supports the citric acid cycle, otherwise known as the Krebs cycle, the most fundamental energy producing action in the human body. ALA supports production of ATP (the body's cellular energy) by acting as a catalyst in producing acetyl-coenzyme A.

ALA's role as an antioxidant is also important. It is known to help neutralize the effects of free radicals on the body by enhancing the antioxidant functions of glutathione. In addition to functioning as an antioxidant, this hard-working nutrient assists the B vitamins in producing energy from the proteins, carbohydrates, and fats consumed through foods. Vitamin B6 plays a major role in the breakdown and utilization of

carbohydrates, fats, and proteins. In addition, vitamin B6 facilitates the release of glycogen from the liver and skeletal muscles so that it can be used for energy.

No longer will you find yourself craving food. By combining our unique blend of powerful appetite suppressants with fat burning agents, we believe we have created one of the most effective diet pills available. The recipe for dieting success is simple: consume less, and burn more calories. Diet Ripped can help.

FREQUENTLY ASKED QUESTIONS:

1: Can Diet Ripped replace physical activity or changes in eating habits as a way to lose weight?

No. The use of Diet Ripped to help lose weight should be combined with physical activity and improved diet to lose and maintain weight successfully over the long term. In their search for the best weight loss program, many people forget the vital role that exercise plays in maintaining a healthy body weight. Once you've reached your target weight especially, your focus will shift away from the best weight loss program to a plan geared towards weight maintenance. That's when physical activity assumes far greater importance.

2: What tips can I follow to make the most out of my Diet Ripped use?

A very important tip to follow is to drink plenty of water. Please drink at least a 12 oz glass of water with each serving. This is beneficial for several reasons. Glucomannan's effectiveness is based on its ability to swell in your stomach. This fiber absorbs water like a sponge leading to a feeling of fullness. Also, water is a natural, fat-free appetite suppressant that contains no calories and no cholesterol. It's low in sodium, helps the body metabolize fat, helps maintain skin and muscle tone, and improves energy levels. With so many benefits, we all should aim for eight glasses of water a day!

3: Will Diet Ripped make me jittery, anxious or nervous?

No, it should not make you feel jittery, anxious or nervous. You will feel an increase in energy, but not nervousness. We formulated Diet Ripped to contain less caffeine per serving than a cup of coffee. With this in mind, it is suggested that you limit your caffeine intake from other sources while taking Diet Ripped.
