presents

HORSE POWER® X

Horse Power X is the reboot of Ultimate Nutrition's first pre-workout supplement, Horse Power®, which was successfully launched in 2006. In the interim, Ultimate Nutrition has comprehensively reviewed and applied the latest improvements in nutritional science to formulate one of the most advanced pre-workout supplements on the market. While many pre-workout powders are an odd amalgam of substances hastily assembled with an eye towards cost, Horse Power X's blend of 11 premium workout enhancers was developed with the premise of merging cutting-edge science with time-tested ingredients.

Leading the way is TORABOLIC™, a specialized fenugreek extract. Powered by TRIGIMANNOSE (standardized to 70%), 500 mg of TORABOLIC (used in conjunction with strength-training) was shown to significantly increase both lean body mass and strength over an 8-week period (compared to strength-training alone). See **Figures 1 and 2** below.

In a 2010 study at the University of Mary Hardin-Baylor, 49 males aged 18–24 were tested to observe the effects of TORABOLIC on body composition and strength. The 26 men who trained and took TORABOLIC experienced a **4.9-pound average increase in lean body mass** and an **85-pound average increase in leg press** (1-rep max) over an 8-week period. The 23 men who trained and took placebo experienced only a 1- and 48-pound average increase over the same period, respectively.

FIGURE 1

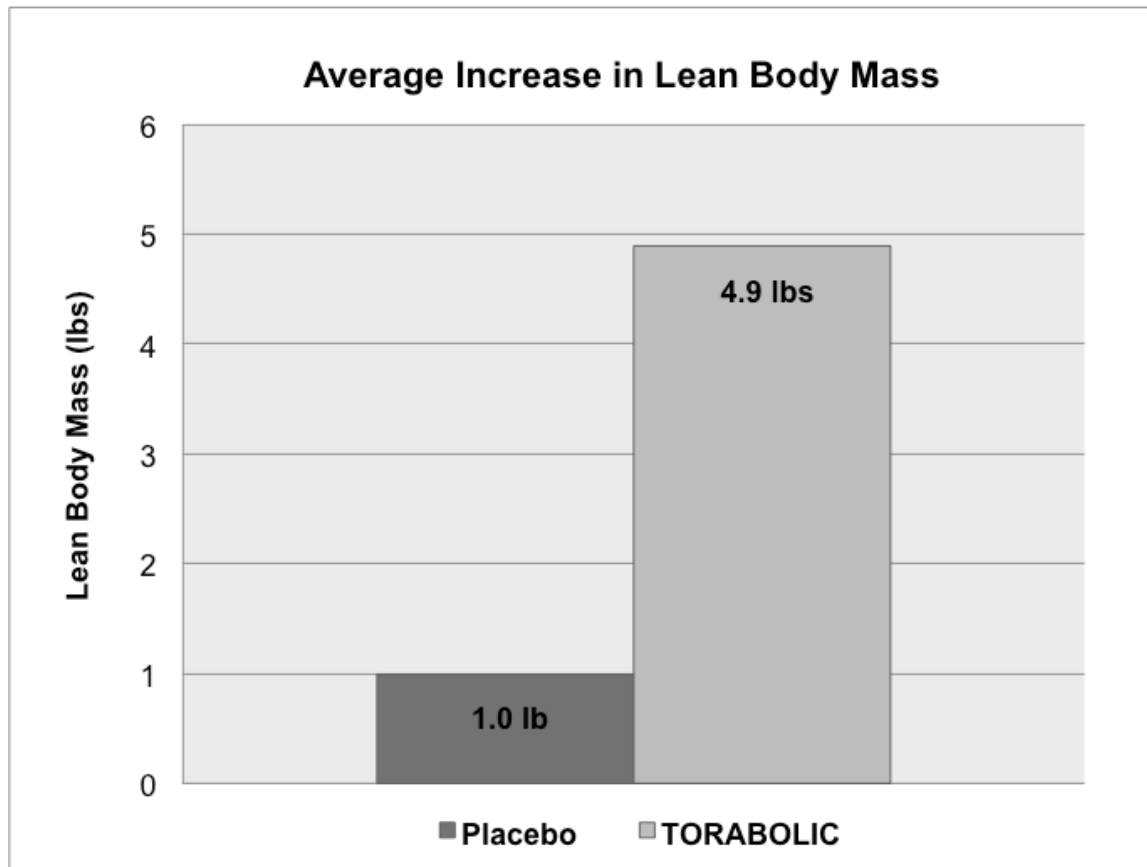

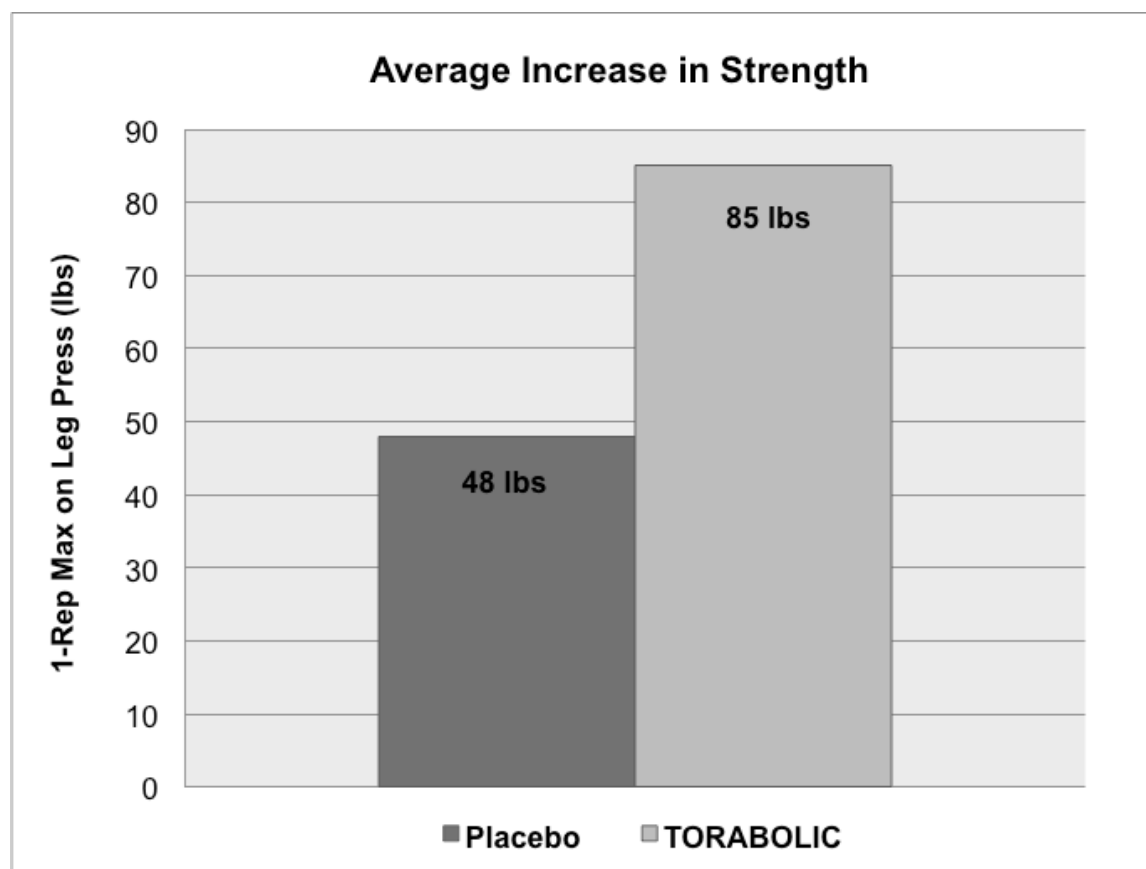

FIGURE 2

In addition to TORABOLIC, the following 10 key ingredients in Horse Power X provide these essential functions

- Beta-alanine (3.2 g): an amino acid which boosts carnosine levels in muscle tissue, thus improving strength and lactic acid buffering (enabling muscles to perform longer)
- Creatine monohydrate (3.5 g): the most studied creatine type increases strength and fat-free mass in conjunction with heavy resistance training by increasing the regeneration rate of adenosine triphosphate (ATP), the main energy source for cells within the body
- L-citrulline (3.0 g): an amino acid and nitric oxide booster which increases vascularity, strength, and aerobic energy production during high-intensity exercise while reducing post-workout muscle soreness
- Capsimax™ (100 mg): hot pepper (capsaicinoid) extract which increases diet-induced thermogenesis, the process by which excess calories are converted to heat
- Razberi-K® (200 mg): raspberry extract which supports diet-induced thermogenesis and energy production
- Caffeine anhydrous (250 mg): a crystalline alkaloid which increases alertness and boosts brain function; 250 mg is roughly equivalent to the amount in 15 ounces of coffee
- Niacin (niacinamide) (50 mg): a vitamin which stimulates muscle-energy production and supports healthy joints
- L-tyrosine (500 mg): an amino acid which supports cognitive function that typically diminishes after physical and mental exhaustion
- Vitamins B6 (pyridoxine HCl) (50 mg) and B12 (50 mcg): vitamins which metabolize protein and fat while converting carbohydrates to sugar for energy

Evaluating the fusion of these 11 high-quality ingredients in totality, it is clear that Horse Power X is among the premier combinations of potency, taste, and science available to avid bodybuilders and fitness enthusiasts alike.
