

JOINT RENEW

Joint Renew is specifically designed to help promote joint health both in active athletes and in aging individuals. It contains ingredients that not only help restore the structural and functional mobility of the joints but also to hold the inflammatory processes at bay, which can aggravate the pain and swelling. Research shows that glucosamine helps restore the structural scaffold around the joint bone in addition to hydrate the joint that facilitates the easy and painless movement. Joint Renew also contains gelatin, which in combination with vitamin C promotes joint health. Vitamin C is also an antioxidant, and helps resolve the free radical load, which is necessarily a consequence of inflammation of the joints. Importantly, gelatin has been shown to enhance joint mobility considerably. Boron functions in concert with vitamin C, glucosamine, gelatin and MSM to stimulate the joints own defenses to, first, ward off the injurious processes leading to joint deterioration and to promote rebuilding of the joint scaffold for ease of movement and mobility.

Available in 100 capsule bottles.
