JOINT RENEW

There seems to have been a discernible rise in the cases of joint pain and wear and tear. In part, it may be attributed to the increasing age of the population as more and more baby boomers advance in years. It is not just typical of older individuals, however. As Americans become more health-conscious and exercise more regularly, the sports-related wear and tear of the joints is increasing accordingly.

Joint wear and tear causes inflammation and swelling, which can make even the simplest of movements an excruciatingly painful experience. Left unto itself, joint wear and tear can cause even more damage as the body continues to turn itself, and may result in arthritis that can be debilitating and may compromise mobility and personal autonomy. There is no cure for arthritis, and even the non-steroidal anti-inflammatory drugs (NSAIDs), such as ibuprofen, provide at best a stopgap solution to the pain and suffering associated with joint deterioration. Recent research has underscored that nutritional intervention can nip these pernicious processes in the bud. That is, if the nutritional intervention regimens are instituted sufficiently early before the body has turned on itself.

Ultimate Nutrition's Joint Renew is specifically designed to help promote joint health both in active athletes and in aging individuals. It contains ingredients that not only help restore the structural and functional mobility of the joints but also to hold the inflammatory processes at bay, which can aggravate the pain and swelling. It is a uniquely designed blend of vitamin C and the trace mineral boron combined with glucosamine, gelatin and MSM (methylsulfonylmethane).

Research abounds that glucosamine helps restore the structural scaffold around the joint bone in addition, of course, to hydrate the joint that facilitates the easy and painless movement. Glucosamine is a natural component of the cartilage around the joint and, as such, it is necessary in its restoration to a healthy state. Likewise, Joint Renew contains gelatin, which in combination with vitamin C promotes joint health. Vitamin C is also an antioxidant, and helps resolve the free radical load, which is necessarily a consequence of inflammation of the joints. Importantly, gelatin has been shown to enhance joint mobility considerably.

The effectiveness of Joint Renew is fortified by the presence of the trace mineral boron. Boron has been used in Germany since the mid-1970s with remarkable results. Supplementation with boron produced relief in 90% of the arthritis patients. Boron functions in concert with vitamin C, glucosamine, gelatin and MSM to stimulate the joints own defenses to, first, ward off the injurious processes leading to joint deterioration and to promote rebuilding of the joint scaffold for ease of movement and mobility.

Ultimate Nutrition's Joint Renew is a state-of-the-art formulation to help not only the aging individuals and athletes involved in intense physical activity but also for those who suffer from occasional pain and swelling of the joints. It is the best that Nature can provide.

FREQUENTLY ASKED QUESTIONS

1) How Quickly Does Joint Renew Work?

Being a nutritional supplement, Joint Renew first primes the body to mobilize its own defense system and beneficial effects may take a few days to few weeks to become apparent. Its effectiveness entirely depends on how serious the damage to the joint is.

2) How Does It Help Athletes?

Some of the athletes may not have joint discomfort. As with any strenuous physical activity, including work-related repetitive motions, the affected joints take the proverbial beating. In time, such strains do take their toll. In case of athletes with robust and flexible joint, Joint Renew can speed the recovery time between training sessions considerably. Thus, it allows more vigorous training more frequently even in those who do not have overt pain.

3) Could Boron Supplementation Pose Any Problems?

No! Boron is a trace mineral, which is required in minuscule amounts to show beneficial effects, which is reflected in Joint Renew.
