

VITAMIN E

Vitamin E is a popular and powerful antioxidant. Vitamin E is effective in preventing the oxidation of polyunsaturated fatty acids. Additionally, Vitamin E is helpful in the prevention of oxidation in the lungs, where strong oxidizing agents nitrogen dioxide and ozone, components of air pollution, are particularly harmful to people exercising. Vitamin E protects white and red blood cells, helping the body's immune system. Ultimate Nutrition's Vitamin E contains all four members (d-alpha, d-beta, d-delta, d-gamma tocopherol) of the tocopherol family of compounds, making it more nutritionally complete. This natural form of vitamin E is the most powerful and effective form of this antioxidant because it is the easiest form for your body to absorb.

Available in 100 softgel bottles.
