Ultimate Crunch Bar

Trying to eat six small meals each day? Sounds easier than it really is, huh? Ultimate Nutrition's Ultimate Crunch Bar may be exactly what you are looking for. Our protein bars are formulated to be a great source of several different proteins and other nutrients, all wrapped up in a quick and easy bar. It is easy to take them with you to work or school or anywhere that you need to get your protein or satisfy your hunger in a healthy way.

Most of us know that quality nutrition and supplementation is the key to achieving athletic and physique success. It is important to eat 5-7 small meals daily to increase nutrient absorption, enhance metabolic rate, and help stabilize blood sugar (and insulin) levels. The Ultimate Crunch Bar allows you to get all your meals in a convenient and tasty way. They help improve overall nutrition and give you key nutrients your body needs to improve health and physical performance.

The Ultimate Crunch Bar contains a protein blend to utilize all the functional benefits of different proteins and help support lean muscle mass. Quality whey protein isolate and concentrate has benefits including providing intact immunoglobulins to support immune function, providing the highest concentration of BCAA's (branched chain amino acids leucine, isoleucine, and valine which play a key role in the muscle building process), it has a high biological value (BV) which means it is readily absorbed and utilized by human muscle tissue, and it may even support IGF-1 levels.

Casein is another milk protein that seems to have a timed-release effect as it forms a gel in the gut to slow the transit time of amino acids. This effect may enhance absorption. It has a very high natural glutamine content. Most of the glutamine in casein is found in the peptide form for better absorption (due to peptide transport systems in the digestive tract). Glutamine is a very important amino acid that has many benefits including supporting lean muscle mass.

Soy protein isolate has been shown to enhance thyroid hormone output, which can increase metabolic rate to support fat loss. The isoflavones in soy have been shown to have numerous health benefits including cholesterol and triglyceride lowering effects. It contains an excellent ratio of glutamine, arginine, and the BCAA's.

Ultimate Nutrition has taken taste to all new levels with the New Ultimate Crunch Bar. You will look forward to eating them each day, and at the same time you will be getting the nutrition that you need.

Frequently Asked Questions:

1. What type of protein is in the Ultimate Crunch Bar?

Each 65-gram Ultimate Crunch Bar contains 16 grams of great tasting, high quality protein. The Ultimate Crunch Bar uses a special protein blend consisting of whey protein; in the form of whey protein isolate and whey protein concentrate, soy protein isolate, and calcium caseinate.

2. What is so special about the calcium used in the Ultimate Crunch Bar?

Calcium Caseinate is a high protein, high calcium nutrient derived from milk. Dairy calcium is shown to be more easily absorbed and utilized than supplemental forms of calcium.

3. How does calcium caseinate aid in fat loss?

Research has shown dairy calcium helps regulate fat metabolism and promote the breakdown of fat. Studies show calcium from dairy sources achieves significantly better weight reduction than calcium supplements such as calcium carbonate. Increasing dairy calcium speeds up weight and fat loss.
