Isopreme Meal Replacement Packet

The importance of eating small, frequent meals (4-6 meals per day) is now almost universally accepted in the fitness community. Without meal replacement packets, this can become a daunting task. I mean who wants or has the time to prepare six well-balanced, protein-rich meals day in and day out? That's where Isopreme Meal Replacement Packet can really make a significant difference.

Feeding your body the right mix of protein, carbs, vitamins and minerals; without a lot of fat and calories, can be hard. How does a whopping 45 grams of protein, 19-23 grams carbs, two grams or less of fat and only 280 calories per serving sound? Delivered in a delicious shake in four mouth-watering flavors?

When selecting a meal replacement powder, you want to make certain that its nutritional content matches up with your health and fitness goals. Are you looking to get lean? You'll want a meal replacement powder that is low in fat. Are you trying to add muscle mass? If so, you'll need lots of protein. This specially formulated nutrition shake was made to include protein, vitamins, minerals and other essential nutrients your body needs to maintain muscle tissue while you reduce calorie intake and optimize fat burning.

Isopreme Meal Replacement Packet is made with premium whey protein isolate. It is the ultimate formula on the market today; each nutritionally complete packet supplying your body with 45 grams of the highest quality (as measured by biological value, BV) peptide bonded and free form amino acids, predigested complex carbohydrates (glucose polymers), oat fiber, and USP quality vitamins.

Ultimate Nutrition's Isopreme bioactive whey is produced exclusively through a new and innovative technology, Coldpure® ultrafiltration which produces superior biologically active whey that is non-denatured and contains the highest content of essential amino acids (EAA) and branched chain amino acids (BCAA). Isopreme bioactive whey contains all the bioactive whey protein fractions (WPF) such as beta-lactoglobulin (55%), alpha lactalbumin (23%), glycomacropeptide (12%), immunoglobulin (5%), serum albumin (3%), proteose peptone (24%) and naturally occurring lactoferrin and lactoperoxidase. Whey protein in this product contains over 50% Essential Amino Acids (EAA) and 26% Branched Chain Amino Acids (BCAA).

Ultimate Nutrition's Isopreme meal replacement packet also contains one of the well-known and essential nutrients for good health – oat fiber. Fiber protects against various types of cancer, including colon,² rectal³ and breast.⁴ This natural ingredient may also protect against duodenal ulcers⁵ and play a role in weight management; not only do high-fiber foods lead to feelings of satiety faster than low-fiber diets, but they also have fewer calories.⁶ Fiber also promotes regularity and prevents constipation,⁷ in addition to controlling or lowering blood sugar⁸ (a plus in the fight against diabetes) and cholesterol⁹ levels. In terms of cholesterol--for which fiber has the most prestigious benefits--fiber

binds to bile acids, which are made up of cholesterol, and carries them from the body via waste. Research indicates that fiber changes the composition of bile acids created from LDL cholesterol in the liver--a situation that slows cholesterol synthesis in the same vein as statin drugs.

Ultimate Nutrition has created a new formula that mixes instantly in water, juice or milk. The new formula mixes easily even in cold water - no blender, no spoon - just shake and go!

FREQUENTLY ASKED QUESTIONS:

1. What's a Meal Replacement?

As the name suggests, you take a balanced meal replacement instead of eating a regular meal. They're a quick and convenient way to treat your body to a bounty of high quality protein, carbohydrates, and a host of other important essential metabolic nutrients.

2. Why take a meal replacement instead of eating a full regular meal?

There are four general reasons for taking a meal replacement: (1) you're trying to lose

weight; (2) you're trying to gain some weight; (3) you want a convenient, nutritious, high-quality meal substitute when you are too busy to make a meal for yourself, or go out for a meal; or, (4) you are participating in an active body-building and/or exercise program.

3. Why are BCAAs beneficial?

BCAAs (Branched Chain Amino Acids) comprise of 1/3 of muscle tissue and are the first amino acids to be catabolized due to intense exercise. Therefore, dietary BCAA supplementation is particularly important for hard-training individuals looking to maximize their muscle gains.
