Ultimate Sensation RTD (Ready To Drink)

If you're a busy person and don't necessarily have access to a blender every time your body calls for a protein shake, then our Ultimate Sensation RTD protein supplement drink will solve your problem. Each delicious shake is premixed and ready to drink right from the can.

Milk protein concentrates are manufactured by a process in which casein and whey proteins are isolated in their native state from fresh skim milk. One noticeable benefit is that they are rich in bound calcium. Calcium is one of the most important minerals for the growth and maintenance of the human body. Calcium is essential for muscle contraction, but calcium also lends to our bone structure, bone recovery (re-calcification), and bone health as well. Calcium has many other functions in addition to maintaining healthy teeth and bones.

Whey protein has long been considered the "Gold Standard" of protein for serious athletes who work hard to develop and sustain a lean, strong and well-defined physique. Whey protein is a naturally complete protein, meaning that it contains all of the essential amino acids required in the daily diet. It has the ideal combination of amino acids to help improve body composition and enhance athletic performance.

Whey protein helps athletes maintain a healthy immune system by increasing the levels of glutathione in the body. Glutathione is an anti-oxidant required for a healthy immune system and exercise and resistance training may reduce glutathione levels. Whey protein helps keep athletes healthy and strong to perform their best.

Casein is a slow-digesting protein. Casein takes considerably longer to digest than whey, meaning that your body will get a slower and steadier release of aminos, protecting against muscle breakdown until your next meal. This slower transit time of amino acids may also enhance absorption. Casein has a high glutamine content, with most of it in peptide form, which gets absorbed better by the intestines. Casein protein will stay with your body longer than other proteins, helping to stave off muscle catabolism.

Diet plays a key role in any weight management program and adding milk proteins often helps to make a positive difference. Recent studies have highlighted the role of the essential amino acid leucine in improving body composition. High quality whey protein is rich in leucine to help preserve lean muscle tissue while promoting fat loss. Leucine is important for athletes as it plays a key role in promoting muscle protein synthesis and muscle growth.

Osteoporosis, which affects over 25 million Americans, is a major health concern. Studies show that low protein intake, including lower levels of animal protein intake, was significantly related to increased levels of bone loss. Regular exercise and adequate

amounts of protein and calcium in the diet can make a positive difference to bone health and may help to reduce the incidence of osteoporosis.

Ultimate Sensation RTD shakes are simple and easy to use - just open one up and enjoy. No need to add water or blend. They're ready when you are!

Frequently Asked Questions:

1. How Do I Use the Ultimate Sensation RTD protein shake?

Take as a supplement or meal substitute, whenever extra protein intake is required. Ultimate Sensation RTD protein shake is great before or after training, or anytime you want a quick, easy and convenient blast of protein for your hungry muscles.

2. Do I need to refrigerate the Ultimate Sensation RTD shake?

The shakes do not have to be refrigerated for storage, but we do recommend that you drink them cold for best taste. The beauty of these shakes is not only their nutritional value but also their convenience. You can take the shakes anywhere with you. You can

pack them in a bag or carry them with you. However, once the shake has been opened, any unused portion should be refrigerated.
