

Ultimate Nutrition, Vitamin D3/K2

The skeleton of an adult human consists of **206 bones**. That gave the research team at **Ultimate Nutrition** 207 reasons to formulate **Ultimate Nutrition's Vitamin D3/K2!** With each and every bone being a reason, what is the 207th you may ask? That reason is to design a product to help you achieve your goals!

You can train through soreness, but an injury can put you completely out of commission. **Ultimate Nutrition's Vitamin D3/K2** formulation includes Vitamin D3, which in a recent clinical study has shown promise to improve calcium absorption and also has the potential to reduce the risk of bone fractures¹. This bone strength is amplified in clinical studies when the Vitamin K2 is paired with Calcium Chelate. This combination yielded potential results for improvement in bone strength and decrease in risk of fracture by **20%**⁴ compared to placebo. These three ingredients form a powerful trio to help avoid a **break** in your training.

Just as your training and goals go hand-in-hand, the formulation includes the vital partnership of Vitamin D3 and Vitamin K2. When taken together, studies have shown a **significant increase** in bone mineral density,² which reflects the strength of the bone which results in your bones as strong as you are. Magnesium Chelate has also been added to the formula which has also been shown to increase bone mineral content by **3%**⁵.

While Vitamin K2 has proven beneficial to bone health, it has also been shown to reduce arterial calcification, the hardening of the hearts blood vessels, by **50%**³. As you're striving to maintain a healthy lifestyle, the bodies engine (the heart) will be able to keep pace as you reach for higher levels.

You don't take a break when pursuing your goals, so don't let a break prevent you from getting there. Pick up a bottle of **Ultimate Nutrition's Vitamin D3/K2** today!
