

Ultimate Nutrition, Vitamin D3/K2

Ultimate Nutrition's Vitamin D3/K2 has been formulated with all 206 bones in the human body in mind. The formulation team at **Ultimate Nutrition** has hand selected a quartet of ingredients to strengthen bones as well as improve heart health.

The formulation begins with Vitamin D3, which in a recent clinical study has shown promise to increase calcium absorption and to reduce the risk of bone fractures¹. The fortification of bones was amplified in clinical studies when Vitamin K2 is paired with Calcium Chelate. This combination has yielded potential decrease in risk of fracture by **20%** compared to placebo, and improvements in bone strength².

Vitamin K2 is also in a synergistic pairing with Vitamin D3. When taken together, studies have shown a **significant increase** in bone mineral density³, which represents the strength of the bone, making it vital for bone health. Magnesium chelate which has been shown in recent research to improve bone mineral content by **3%**⁴.

While all of the ingredients are crucial to bone health, Vitamin K2 is particularly effective in reducing arterial calcification, which is hardening of the heart, by **50%**⁵. **Ultimate Nutrition's Vitamin D3/K2** is an key part of your daily supplementation for overall health and healthy aging.
